

I CLAIM

1. A toothbrush comprising:

5 a handle having a first top surface and a first bottom surface;

10 a head having a second top surface and a second bottom surface, the head connected to the handle;

a plurality of bristles located on the second top surface of the head;

15 a reservoir having toothpaste therein located within the handle; and

a first cover covering the reservoir.

2. The toothbrush as in claim 1 further comprising a tab attached to the cover for facilitating removal of the cover from a covering relationship with the reservoir.

25 3. The toothbrush as in claim 1 wherein at least a portion of the bristles are ramped downwardly toward the handle.

4. The toothbrush with reservoir as in claim 1 wherein the reservoir is disposed within the first top surface of the handle such that the first cover is positioned on the first top surface 20 in order to cover the reservoir.

5. The toothbrush as in claim 4 wherein the reservoir extends through to the first bottom surface of the handle.

6. The toothbrush as in claim 5 further comprising a second cover that is positioned on the first bottom surface of the 25 handle in order to cover the reservoir.

7. The toothbrush as in claim 6 further comprising a channel disposed on the first top surface of the handle and extending between the reservoir and the handle.

8. The toothbrush as in claim 1 further comprising a channel 5 disposed on the first top surface of the handle and extending between the reservoir and the handle.

9. The toothbrush with reservoir as in claim 1 further comprising:

an opening disposed within the second top surface of the 10 head;

a duct connecting the opening with the reservoir; and wherein placing pressure on the cover causes the toothpaste to pass through the duct and exit through the opening.

10. The toothbrush as in claim 9 wherein the duct is disposed 15 along a longitudinal axis of the handle.

11. The toothbrush with reservoir as in claim 9 wherein the reservoir is disposed within the first top surface of the handle such that the first cover is positioned on the first top surface in order to cover the reservoir.

20 12. The toothbrush as in claim 11 wherein the reservoir extends through to the first bottom surface of the handle.

13. The toothbrush as in claim 12 further comprising a second cover that is positioned on the first bottom surface of the handle in order to cover the reservoir.

14. The toothbrush with reservoir as in claim 1 further comprising:

a single opening disposed within the second top surface of the head;

5 a duct connecting the opening with the reservoir; and wherein placing pressure on the cover causes the toothpaste to pass through the duct and exit through the opening.

15. The toothbrush as in claim 14 wherein the duct is disposed along a longitudinal axis of the handle.

10 16. A toothbrush comprising:

a handle having a first top surface and a first bottom surface;

a head having a second top surface and a second bottom surface, the head connected to the handle;

15 a plurality of bristles located on the second top surface of the head;

a reservoir having toothpaste therein disposed within the first top surface of the handle;

20 an opening disposed within the second top surface of the head;

a duct connecting the opening with the reservoir;

a bladder covering the reservoir; and

wherein placing pressure on the bladder causes the toothpaste to pass through the duct and exit through the opening.

17. The toothbrush as in claim 9 wherein the duct is disposed along a longitudinal axis of the handle.
